OFFSET PROJECT CATEGORY OVERVIEW

Located in southwest Queensland, our integrated carbon and impact AG projects work to regenerate and promote native vegetation whilst implementing sustainable agricultural practices. These projects provide diversification of income and therefore are the enabler to negate the need to over graze marginal and ecologically sensitive landscapes. Widespread land clearing has significantly impacted local ecosystems. This degradation and loss of biomass threatens the food and habitat to which native fauna rely. Historical forest clearing practices have encouraged weeds and invasive animals to thrive. Enabling forest regeneration contributes greatly to reducing greenhouse gas emissions and therefore arresting climate change.

Our projects host a diverse number of endemic plant species which provide critical habitat for native fauna. Additional activities being undertaken include feral animal control, noxious weed management, erosion control and artesian water management initiatives. Our projects aim to deliver sustainable landscapes that restore a health environmental balance between agriculture and conservation.

The projects meet the following Sustainable Development Goals

OFFSET PROJECT CATEGORY OVERVIEW

Across India, wind farms introduce clean energy to the grid which would otherwise be generated by coal-fired power stations. Wind power is clean in two ways: it produces no emissions and also avoids the local air pollutants associated with fossil fuels. Electricity availability in the regions have been improved, reducing the occurrence of blackouts across the area.

The projects support national energy security and strengthen rural electrification coverage. In constructing the turbines new roads were built, improving accessibility for locals. The boost in local employment by people engaged as engineers, maintenance technicians, 24-hour on-site operators and security guards also boosts local economies and village services.

The projects meet the following Sustainable Development Goals
