OFFSET PROJECT CATEGORY OVERVIEW

The Great Barrier Reef's water quality is under serious threat by land-based activities such as farming along the coastline. Water running off farms flushes fertilisers, pesticides and soil into rivers and onto the reef, with dire consequences for corals, sea grasses and marine wildlife.

These projects deliver the revegetation and protection of native forest, wetlands and woodlands throughout the catchments of the Great Barrier Reef. The investments have flow-on impacts for reducing nutrient run-off, one of the contributing factors to the crown-of-thorn starfish outbreak.

The projects also help to restore habitat for native plants and animals, while providing alternative sources of income for residents of rural communities.

The projects meet the following Sustainable Development Goals

E V I D E N C E
