OFFSET PROJECT CATEGORY OVERVIEW

Across India, wind farms introduce clean energy to the grid which would otherwise be generated by coal-fired power stations. Wind power is clean in two ways: it produces no emissions and also avoids the local air pollutants associated with fossil fuels. Electricity availability in the regions have been improved, reducing the occurrence of blackouts across the area.

The projects support national energy security and strengthen rural electrification coverage. In constructing the turbines new roads were built, improving accessibility for locals. The boost in local employment by people engaged as engineers, maintenance technicians, 24-hour on-site operators and security guards also boosts local economies and village services.

The projects meet the following Sustainable Development Goals

E X T R A O R D I N A R Y I M P A C T

OFFSET PROJECT CATEGORY OVERVIEW

Demand for electricity in Turkey is growing this wind farm project supplies the national grid with zero emission energy generated by the wind resources of the Gokçedag Mountains of Osmaniye province in southeast Turkey.

In addition to reducing greenhouse gas emissions by displacing energy from thermal power plants, the project has also created employment opportunities in the area.

These project help to secure supplies for rural communities and works with locals to identify infrastructure needs in order to improve connectivity and community facilities.

The projects meet the following Sustainable Development Goals
